ABOUT POLYGLYCAN®

Polyglycan® is a patented formulation designed to replace lost or damaged synovial fluid. It contains naturally-occurring components of the synovia that play a central role in maintaining the homeostatic environment of the joint.

PROPERTIES

Glycosaminoglycans are important components of all extracellular tissue structures including cartilage and synovial fluid. The active components in Polyglycan® show viscoelastic and polyionic properties similar in nature to synovial fluid. The patented 3-component formula has demonstrated characteristics beyond any of these components used individually.

EVERY WINNING RIDE STARTS WITH HEALTHY JOINTS

Polyglycan® has been an integral part of treatment plans from lameness specialist veterinarians for many years. Read more online at Polyglycan.com but here are some highlights:

"Polyglycan® is the primary product for joint injections in my equine practice since 2006."

Chris Morrow, DVM Mobile Veterinary Practice, Amarillo, TX.

"I use Polyglycan® exclusively (other than biologics) in joint therapy. In other words, Polyglycan® is my 'go to' medication."

Robert W. Brusie, DVM, Diplomate ACVS, Palm Beach Equine Clinic, Wellington, FL.

“When I treat a joint I want to use something that is going to reduce the inflammation and be protective. It’s important to me to be able to prevent further damage to the articular surface as well as the soft tissues in the joint, improving overall joint health.”

Dr. Jack Snyder

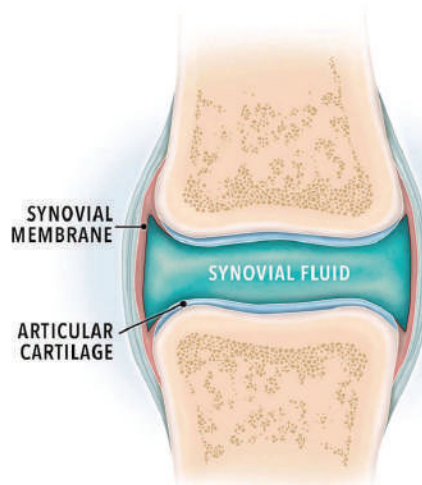

DVM, PhD, Diplomate ACVS, Owner of Babalou 41

UNLIKE ANY OTHER PRODUCT

POLYGLYCAN® IS NOT A GENERIC

Polyglycan® is a patented 3-component formula which has demonstrated characteristics beyond any of these components used individually. Polyglycan® is specifically formulated to have the same viscosity and lubricating properties as natural equine synovial fluid.

BENEFITS

- Help replenish lost synovial fluid with naturally occurring elements
- Assist in normalization of synovial fluid viscosity
- May be used for post-surgical lavage of the joint cavity and surfaces

FREQUENTLY ASKED QUESTIONS

IS POLYGLYCAN® A GENERIC PRODUCT?

No. Polyglycan® is a patented 3-component formula which has demonstrated characteristics beyond any of these components used individually. Polyglycan® is specifically formulated to have the same viscosity and lubricating properties as natural equine synovial fluid.

IS POLYGLYCAN® A DRUG?

Polyglycan® is a medical device – it achieves therapeutic effect by mimicking the physical properties of equine synovial fluid. The mechanical lubrication and cushioning provided by Polyglycan® helps by protecting the joint in a non-chemical/non-metabolic manner.

IS POLYGLYCAN® MANUFACTURED IN AN FDA-REGISTERED FACILITY?

Yes! The Polyglycan® manufacturing facility achieved Current Good Manufacturing Practice (CGMP) status over 10 years ago, and is routinely inspected by FDA.

ARE PRODUCTS SIMILAR TO POLYGLYCAN® EVER USED IN HUMANS?

Yes! In fact, all hyaluronic acid products currently used in humans for intra-articular joint treatments are also medical devices.

WHAT IS A MEDICAL DEVICE?

FDA determines a medical device as: “an instrument, apparatus, implement, machine, contrivance, implant, in vitro reagent, or other similar or related article, including a component part, or accessory which is: 1. recognized in the official National Formulary, or the United States Pharmacopoeia, or any supplement to them, 2. intended for use in the diagnosis of disease or other conditions, or in the cure, mitigation, treatment, or prevention of disease, in man or other animals, or 3. intended to affect the structure or any function of the body of man or other animals which does not achieve its primary intended purposes through chemical action within or on the body of man or other animals and which is not dependent upon being metabolized for the achievement of its primary intended purposes.”

WHAT ARE THE LABEL CLAIMS FOR THE USES OF POLYGLYCAN®?

Polyglycan® is specifically formulated to mimic the physical properties of normal equine synovial fluid. The product's intended use is in the synovial space (directly in the joint) in horses as a post-surgical lavage, a synovial fluid replacement, or as a viscosupplement.
